

4th FABEC Expert Workshop

Take Away

Wednesday, 12 February 2020

IBIS Paris CDG Airport

Design

Cross ACC DCTs => how to proper code them between FRA ACCs and non FRA ACCs

Keep intermediate points => FUA, vertical optimization

Open issues and possible answers (temporary/pragmatic)

E/X on points on FRA boundaries

- Consider the FRA boundary as « conceptual » and publish it on the E/X points

FL changes

- PTRs?
- Intermediate points (+RAD...)?
- Keep current routes temporarily

FLOS (per waypoint)

- Per segment... or RAD or follow publication

FUA: how to improve refiling?

RAD: possible solutions on the table, contingencies?

CFSPs/AOs

One model, one phase please

One floor and preferably at FL245 or below

One more workshop before finalization

CFSPs/Aos need time to code/test : final data 9 months before (not necessarily publication). Access to AURA tool?

Example for PANSA/Austrocontrol?

Nice to have

Web Application accessible for airlines/CFSPs including vertical connectivity

Routes around military airspaces published in Appendix 7 (or available elsewhere)

Route catalogue

This not the end but only the beginning...

Exchanges between should continue and common tests are ahead

FRA implementation will evolve

Presentations will be available on www.fabec.eu
