Description & Analysis

ENV KPI #1: KEA/HFE at FABEC level (excl. 10 best/worst days)

In the FABEC area, the yearly rolling average value of efficiency of the flown trajectory (expressed in KEA) was 96,99% for the period of December 2019 - November 2020, excluding the 10 best and 10 worst days. This is the highest KEA value since 2015. It has increased by 0.29pp as compared to 96,70% in the period of December 2018 - November 2019 and increased by 0.03pp compared to the 12 month rolling average of October 2020. The rolling average has been decreasing slowly but steadily during the last year from 96,68% in the December 2019 to 96,66% in February 2020, then the revers trend started: the value were increasing until it reached 96,99% in November 2020, which is 0.24pp above the FABEC target for 2020, which was set to 96,75%. The difference between KEA and KEP is 2.98pp, which is 0.02pp bigger than in the previous month.

ENV PI#1: HFE based on Actual at FABEC level (including all days)

The flight efficiency (expressed in KEA including all days on monthly bases) has reached 97,40% in November 2020, which is 0.15pp higher when compared to October 2020 (97,25%) and 0.25pp lower compared to April 2020 (97,65%) which is the highest value since January 2016. The KEA in October 2020 has increased drastically by 0.49pp compared to the same month in 2019 (KEA in November 2019 was 96,91%). The reason for such an increase in the flight efficiency is a significant decrease of the traffic volume because of the corona crisis. This positive correlation between flight efficiency and traffic can be seen in the graph below.

ENV PI#2: KEP/HFE based on Filed FPL at FABEC level (excl. 10 best/worst days)

Starting from December 2019 the KEP 12 month rolling average indicator shows slow but steady decrease from 93.96% to 93,95% in January, February and March 2020. KEP has been stable since April 2020 till July 2020 (93,94%). In August 2020 it increased by 0.02pp reaching 93,96%, in September and October it increased by 0.02pp reaching 93,98% and 94,00% accordingly, in November 2020 it increased by 0.01pp reaching 94,01%. The KEP rolling value for November 2020 is 0.03pp bigger than the same value of the same period one year prior.

ENV PI#3: HFE based on Filed FPL at FABEC level (including all days)

The figure shows a decrease of flight efficiency based on the filed flight plan by 0.01pp in November 2020 (94,16%) compared to October 2020 (94,17%). But it showed an increase by 0.79pp compared to June 2020 (93,37%) which was the lowest value since January 2016, indicating some problems in the filing of flight plans during the corona crisis, caused by extensive booking of military areas compared to pre-COVID time. KEP value for November 2020 is 0.12pp better than in November 2019.

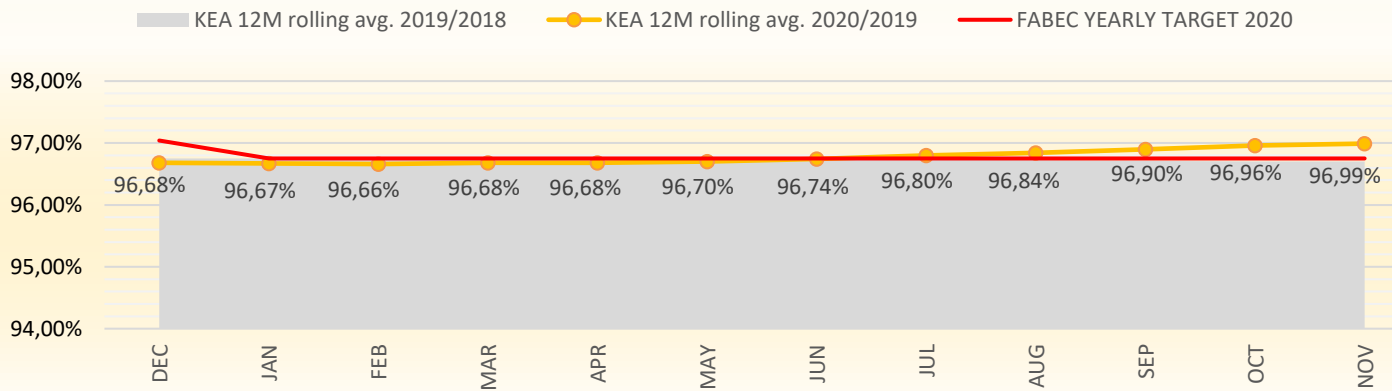

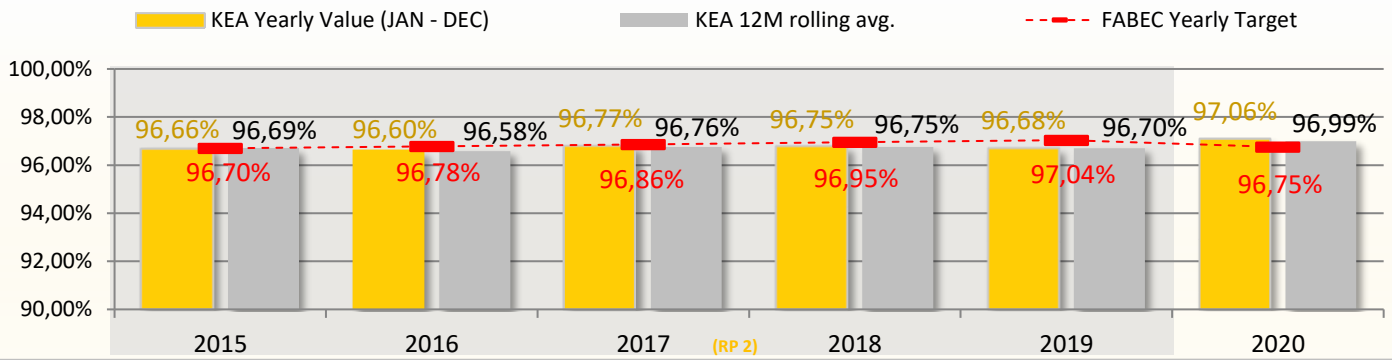

ENV PI#4: HFE based on Actual at State level (including all days)

At the national level in November 2020 all countries demonstrated an increase of flight efficiency based on actual trajectories compared to October 2020: Belgium (0.14pp), France (0.05pp), Germany (0.12pp), the Netherland (0.13pp) and Switzerland (0.03pp).

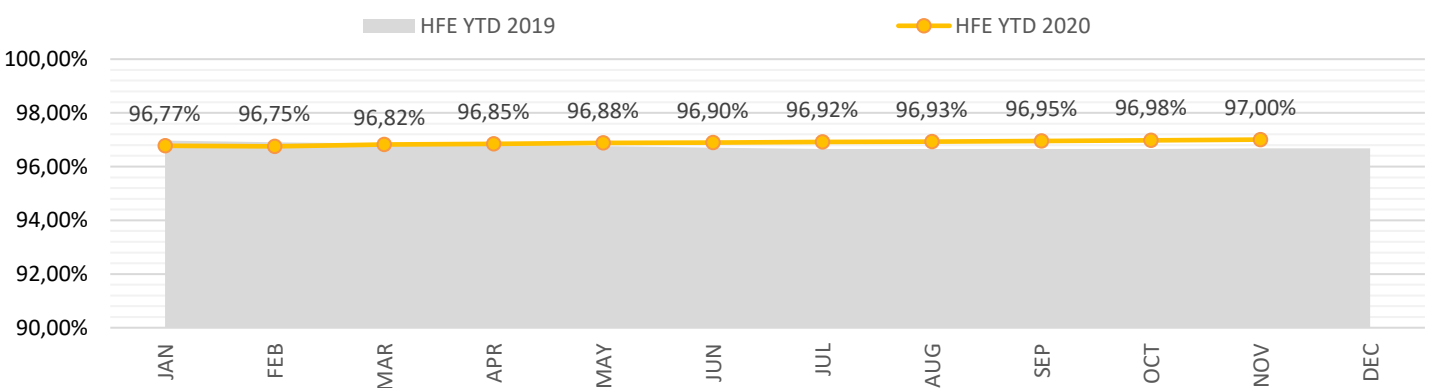

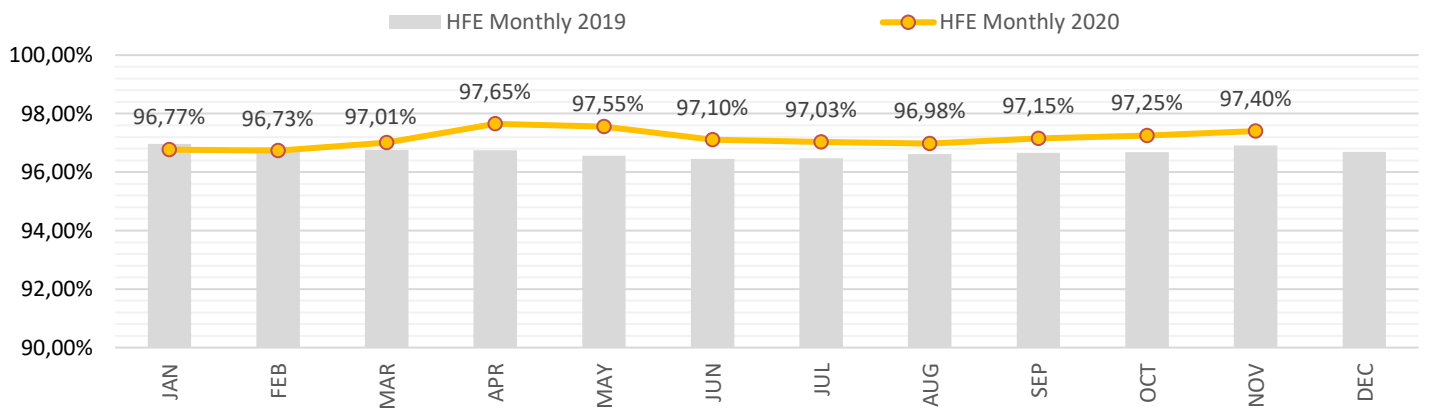

ENV PI#5: HFE based on Filed FPL at State level (including all days)

At the national level in November 2020 Belgium (0.58pp), the Netherland (0.20pp) and Switzerland (0.14pp) demonstrated a decrease of flight efficiency based on filed flight plan compared to September 2020, France demonstrates an increase by 0.05pp, and Germany keeps the same value compared to one month prior.

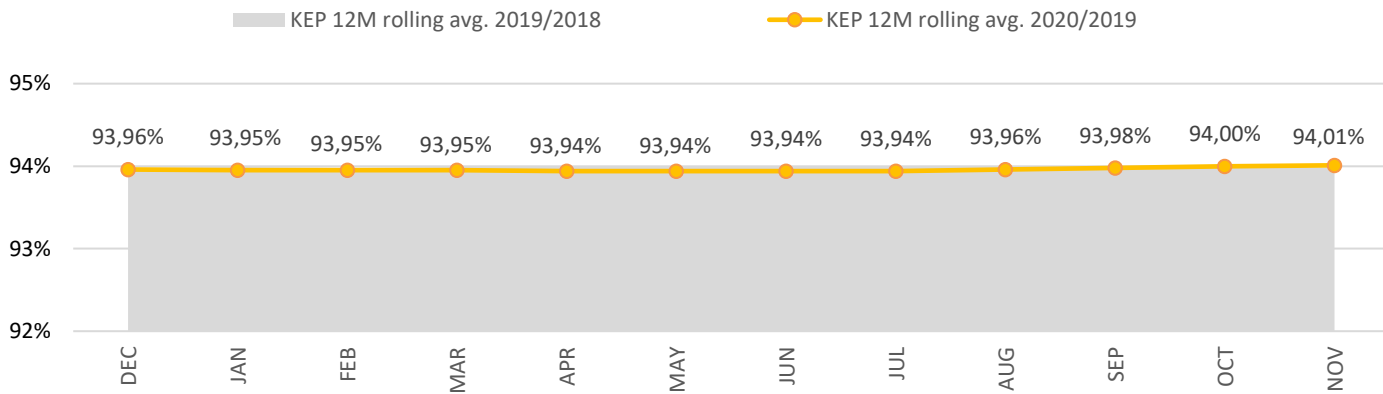

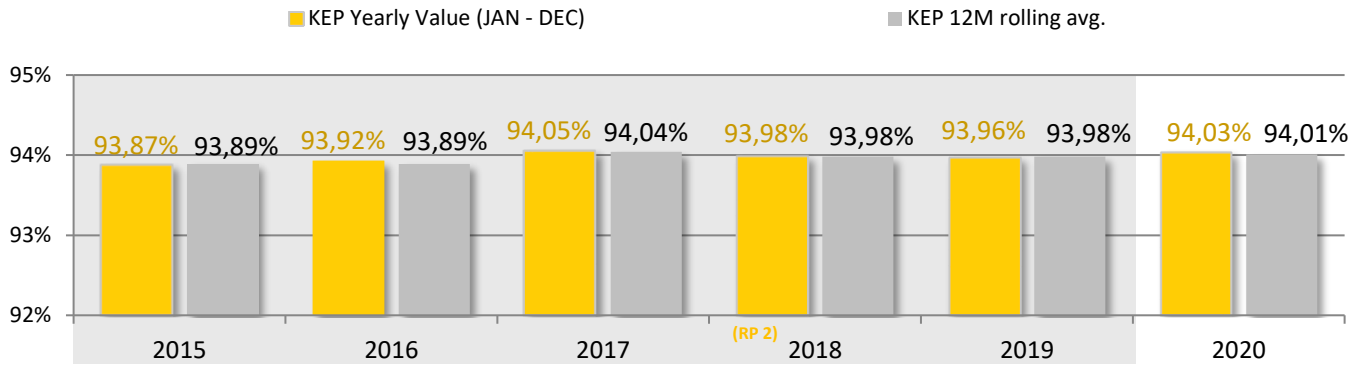

KPI #1: KEA/HFE at FABEC level (excl. 10 best/worst days)

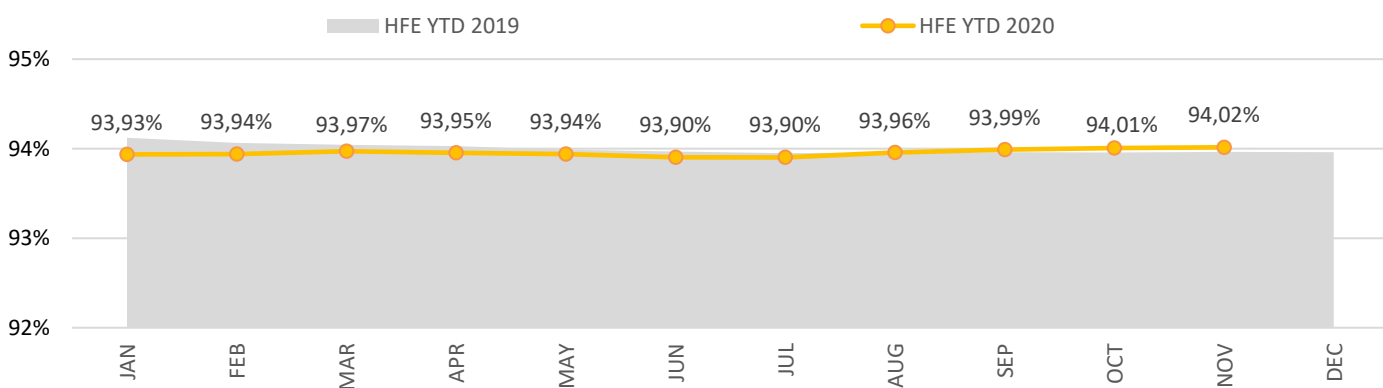

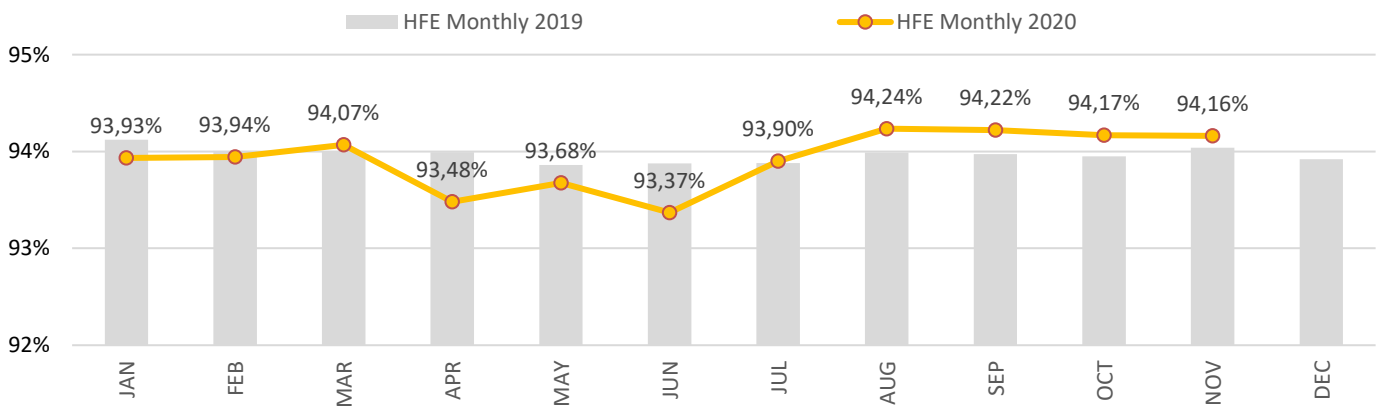

PI #1: HFE based on Actual at FABEC level (incl. all days)

PI #2: KEP/HFE based on filed FPL at FABEC level (excl. 10 best/worst days)

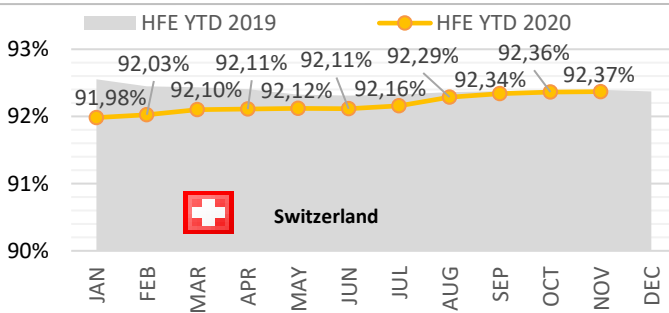

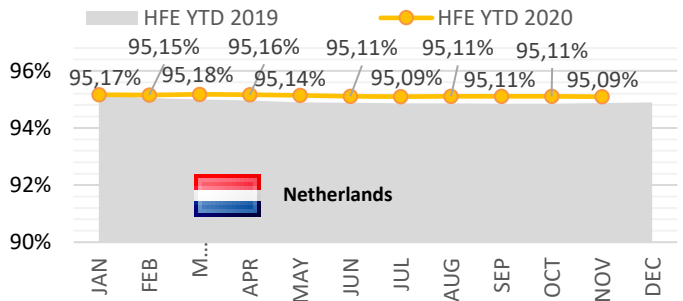

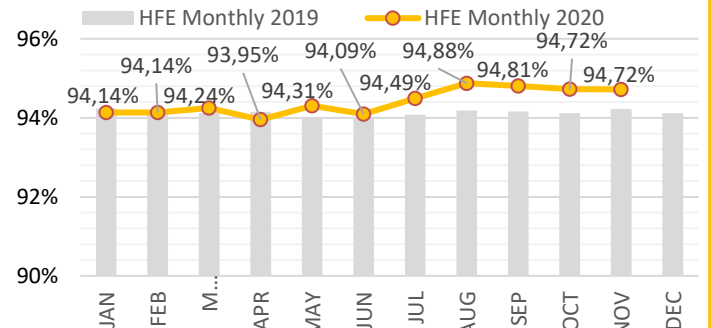

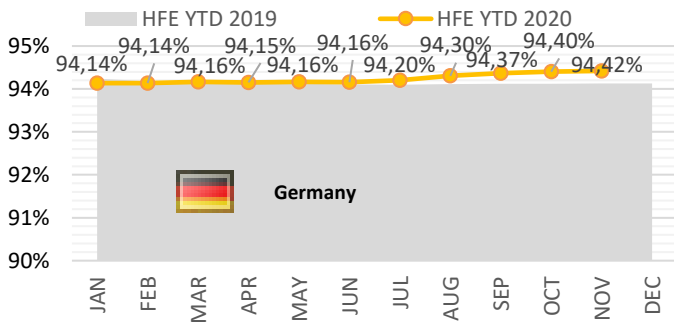

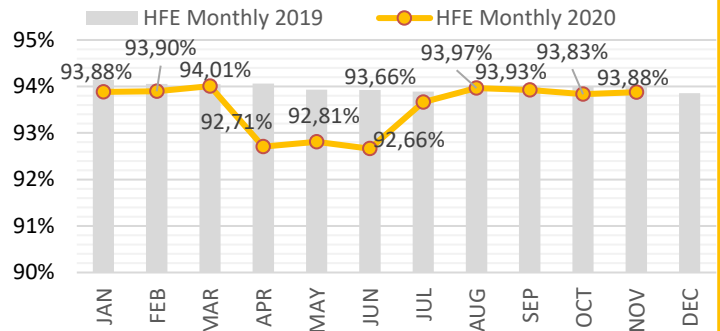

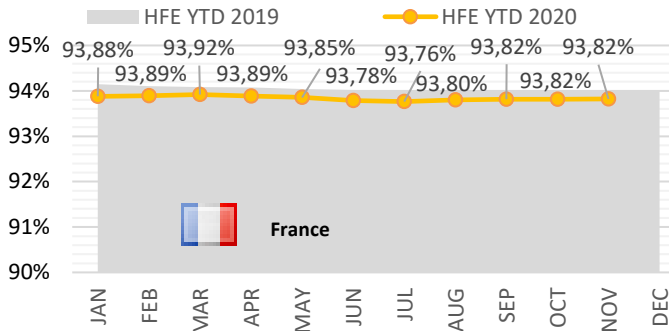

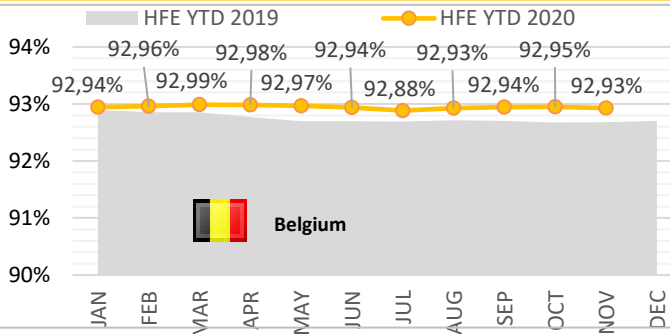

PI #3: HFE based on filed FPL at FABEC level (incl. all days)

PI #4: HFE based on Actual at State level (incl. all days)

PI #5: HFE based on filed FPL at State level (incl. all days)

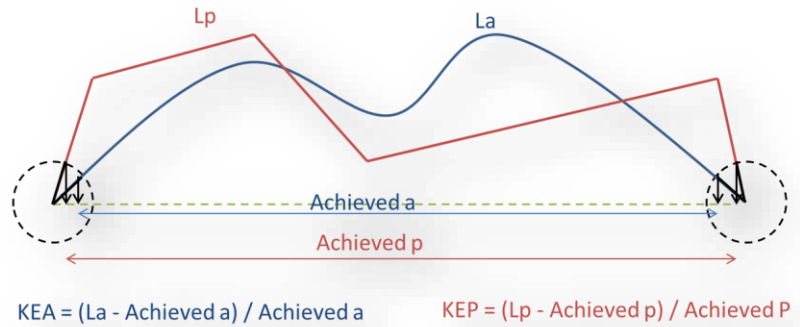

Glossary

KEP / KEA definition

KEP compares the length of the en route section of the last filed flight plan L_p with the corresponding Achieved p of the great circle distance.

KEA compares the length of the en route section of the actual trajectory L_a with the corresponding Achieved a of the great circle distance.

KEP is the reference for SES-wide improvement with a global target set by the European Commission. KEA is the reference for FAB improvements with individual targets set by the European Commission.

Achieved distance calculation

4 reference points are identified for KEP/KEA calculation :

The **O**rigin and **D**estination points are the targets of the trajectory and the reference points for the Great Circle:

- the airports inside the SES area
- when the airports are outside the SES area, they are the trajectory point at the SES border

The **eN**try and **eX**it points are the first and last points of the part of the trajectory considered within a FAB:

- the point on the 40NM circle around departure or arrival airport
- the point on the border with the previous/next FAB

TABLE OF ABBREVIATIONS

ADEP - Airport of Departure

ANSP - Air Navigation Service Provider

ATFM - Air Traffic Flow Management

FABEC - Functional Airspace Block Europe Central

TMA - Terminal Manoeuvring Area, delimited by a 40 NM circle around the origin and destination airport.

ADES - Airport of Destination

PRU - Performance Review Unit

YTD - Year to Date value

FPP - FABEC Performance Plan
