Description & Analysis

ENV KPI #1: KEA/HFE at FABEC level (excl. 10 best/worst days)

In the FABEC area the yearly rolling average value of efficiency of flown trajectory (expressed in KEA) was 97,04% for the period of February 2021-January 2022, excluding the 10 best and 10 worst days. This value is 0.21pp less than the reference value (97,25%) and 0.09pp less compared to the 12-month rolling average of January 2021 (97,13%). The value in January 2022 is the same as the value of one month prior and 0.20pp less than the highest yearly rolling KEA value since 2015 reached in March and April 2021 (97,24%). The rolling KEA indicator has been decreasing slowly but steadily during the last year from the peak in March and April 2021. In January 2022 the difference between KEA and KEP is 2.79pp, which is 0.02pp smaller than one month prior.

ENV PI#1: HFE based on Actual at FABEC level (including all days)

The flight efficiency (expressed in KEA including all days on monthly bases) has reached 97,14% in January 2022, which is 0.02pp higher compared to December 2021 (97,12%) and 0.51pp lower compared to April 2020 (97,65%), which is the highest value since January 2016. The KEA in January 2022 has decreased drastically by 0.29pp compared to the same month in 2021 (KEA in January 2021 was 97,43%). This positive correlation between flight efficiency and traffic can be seen in the graph below.

ENV PI#2: KEP/HFE based on Filed FPL at FABEC level (excl. 10 best/worst days)

The KEP 12 month rolling average indicator was 94,25% for January 2022. This is the highest yearly rolling KEP value since 2015. It has increased by 0.20pp as compared to 94,05% in January 2021 and increased by 0.02pp compared to the 12-month rolling average of December 2021. The rolling average has been increasing slowly but steadily during the year of 2021 from 94,04% in February (the lowest value of the year) until it reached 94,25% in January 2022.

ENV PI#3: HFE based on Filed FPL at FABEC level (including all days)

The figure shows an increase of flight efficiency in January 2022 (94,46%) by 0.06pp compared to December 2021 (94,40%) and a significant increase in flight efficiency in January 2022 by 0.31pp compared to the value in January 2021 (94,15% in January 2022 vs 94,15% in January 2021).

ENV PI#4: HFE based on Actual at State level (including all days)

At national level, all counties demonstrated a decrease of flight efficiency based on actual trajectories in January 2022 compared to January 2021.

ENV PI#5: HFE based on Filed FPL at State level (including all days)

At national level, four countries demonstrated an increase in flight efficiency based on the filed FPL compared to January 2021: Belgium, France, Germany and the Netherlands. In contrast, a decrease of flight efficiency based on the filed flight plan was observed in Switzerland.

KPI #1: KEA/HFE at FABEC level (excl. 10 best/worst days)

PI #1: HFE based on Actual at FABEC level (incl. all days)

PI #2: KEP/HFE based on filed FPL at FABEC level (excl. 10 best/worst days)

PI #3: HFE based on filed FPL at FABEC level (incl. all days)

PI #4: HFE based on Actual at State level (incl. all days)

PI #5: HFE based on filed FPL at State level (incl. all days)

Glossary

KEP / KEA definition

KEP compares the length of the en route section of the last filed flight plan L_p with the corresponding Achieved p of the great circle distance.

KEA compares the length of the en route section of the actual trajectory L_a with the corresponding Achieved a of the great circle distance.

$$KEA = (L_a - \text{Achieved } a) / \text{Achieved } a$$

$$KEP = (L_p - \text{Achieved } p) / \text{Achieved } P$$

KEP is the reference for SES-wide improvement with a global target set by the European Commission. KEA is the reference for FAB improvements with individual targets set by the European Commission.

Achieved distance calculation

4 reference points are identified for KEP/KEA calculation :

The **O**rigin and **D**estination points are the targets of the trajectory and the reference points for the Great Circle:

- the airports inside the SES area
- when the airports are outside the SES area, they are the trajectory point at the SES border

The **eN**try and **eX**it points are the first and last points of the part of the trajectory considered within a FAB:

- the point on the 40NM circle around departure or arrival airport
- the point on the border with the previous/next FAB

F+ - F-	Forward achieved distance
B+ - B-	Backward achieved distance
$H = \frac{1}{2}(F+ - F-) + \frac{1}{2}(B+ - B-)$	Achieved distance

$$H_j = \frac{1}{2} \text{ Forward achieved distance} + \frac{1}{2} \text{ Backward achieved distance}$$

TABLE OF ABBREVIATIONS

ADEP - Airport of Departure

ANSP - Air Navigation Service Provider

ATFM - Air Traffic Flow Management

FABEC - Functional Airspace Block Europe Central

TMA - Terminal Manoeuvring Area, delimited by a 40 NM circle around the origin and destination airport.

ADES - Airport of Destination

PRU - Performance Review Unit

YTD - Year to Date value

FPP - FABEC Performance Plan
